IPification Officially A Channel Partner for GSMA Open Gateway

March 27, 2024 – Singapore

The leading global provider of one-click mobile authentication and fraud prevention solutions, IPification, is now an official channel partner for GSMA Open Gateway, the world's largest connectivity platform for mobile network operators and mobile developers. The GSMA Open Gateway Memorandum of Understanding (MoU) is supported by some of the world's largest and most innovative Mobile Network Operators, representing 65% of mobile connections, thereby unlocking a plethora of new partnership opportunities for IPification.

GMSA Open Gateway was designed as a paradigm shift in the way the telecommunications industry designs and ships services in an API economy world. Today, together with CAMARA, they give developers a single point of access to service APIs that include anti-fraud solutions, mobile connectivity, cloud and edge solutions, payment, and carrier billing.

IPification is the world's leading provider of mobile IP address-based authentication, phone verification, and fraud prevention solutions. Along with GSMA and the CAMARA Project, IPification provides telecom operators and mobile app developers with Identity and Consent Management, Number Verification, Device Identifier, Device Status, Device Swap, SIM swap, Know Your Customer, and Routing API solutions, all of which are designed to boost the security of mobile apps without deteriorating the user experience.

Through CAMARA, mobile network operators simply need to implement the IPification GMID-BOX to get access to the full package of IPification solutions they can offer to mobile app developers. With the support of GSMA Open Gateway platform, IPification hopes to create an ecosystem of mobile network operators offering bank-grade secure and frictionless solutions.

"We are thrilled to become an official channel partner for GSMA Open Gateway. This partnership will allow us to not only provide our industry-leading mobile authentication and fraud prevention solutions to a wider range of mobile network operators and mobile developers, but also empower mobile operators to remain key players in the mobile identity space in the future, unlocking new revenue streams through a secure and user-friendly experience."

— Stefan Kostic, IPification CEO.

About IPification

IPification is building the backbone of mobile authentication of today and tomorrow. By verifying the phone number, SIM card and device via IP address, IPification patented technology enables secure, passwordless, zero-tap compatible mobile user authentication, registration, transaction approval and fraud prevention solutions for any mobile application. Readily available across numerous countries and regions, IPification is trusted by the leading telecom, technology, payment, and OTT companies.
